PREMIER UNIVERSITY CHITTAGONG

Department of Computer Science & Engineering

Experiment Submission.

Course Title: Neural Network and Fuzzy Logic Laboratory

Course Code: CSE 452

Assignment no.: 03

Name of Assignment: Classifying Textual Emotions using Neural

Networks (word embeddings, LSTM and more...)

Submitted to:

Md. Ataur Rahman

Department of Computer Science and Engineering. Premier University Chittagong.

Submitted by:

Name : Sadia Chowdhury Dola

ID : 1703310201465

Department : C.S.E.
Batch : 33rd
Semester : 7th
Section : C7B

Performance Date: 27-09-2021

Submission Date: 06-09-2021

I had run the code above 60 times. I had also tried run the code several times with changing activation functions, optimizers, losses, layers etc. But the dataset didn't show good result to me.

Dataset: Six Basic Emotion Types (বিষণ্ণতা, সুখী, বিতৃষ্ণা, বিস্ময়, ভয়,রাগ),

The distribution of the dataset is as follows:

Labels	Training Set	Testing Set
বিষয়তা	1000	200
সুখী	1500	300
বিতৃষ্ণা	500	100
বিসায়	400	80
ভয়	300	60
রাগ	1000	200
Total	4700	940

Output:

Experiment: 01

forward_layers = LSTM(units=128, return_sequences=False)

backward_layers = LSTM(units=128, return_sequences=False, go_backwards=True)

 $model. add (Bidirectional (layer=forward_layers, backward_layer=backward_layers))$

model.add(Dense(units=6, activation='softmax'))

model.compile(optimizer='adam', loss='categorical_crossentropy', metrics=['acc'])

23] 1 model.fit(padded_train_doc, train_labels, epochs=10, verbose=1)
